

Team,

I am pleased to announce that Adam Hickey has accepted the position of Designer – Product Definition within Special Military Products Engineering (SMPE).

Adam joined GE Aviation in March of 2013 as a contractor, working as a data acquisition technician for Data Systems Operations. Later that same year he accepted a position in the Vibration Lab of component testing in 703. In his role as Vibration Test Specialist, Adam was primarily responsible for performing calibrations on engine components for both development and production engines. In addition to engine calibrations, Adam was also responsible for performing vibration and strain analysis on development, production, and coupon parts.

Adam has an Associate of Applied Science degree in Power Systems Engineering from Cincinnati State. He is married to his high school sweetheart, Stacy, and they are expecting their first child in August. Adam enjoys spending time with his wife and five dogs, doing projects around the house, tinkering with electronics, collecting video games, visiting museums, and studying history.

Please join me welcoming Adam to his new role.

Jerry Brown
